

STOP
Involuntary
Exposure!

Say NO
to 5G!

Concerned
about the
health & safety
of your children
and family?

- **Wireless radiation from cell towers/antennas/wireless devices is a scientifically proven health risk.**
- The deployment of small cells towers in neighborhoods across America will result in the involuntary exposure of millions of Americans.
- [Thousands of independent scientific studies](#) have shown that long-term exposure to wireless radiation causes biological harm: cancers, DNA damage, neurological and cognitive harm, heart abnormalities, reproductive effects, microwave sickness, and other serious health problems.
- **Children are more vulnerable to these effects. They're still developing.**
- [FCC exposure guidelines](#) are more than 30 years old and do not consider these types of biological effects.
- A recent study by the [U.S. National Institutes of Health](#) showed "clear evidence" of cancer from exposure to wireless radiation.
- We are not against technology, but we're opposed to the roll out of technology that has not been proven safe.
- There are no studies to support the industry's claim of 5G safety.
- **5G will NOT immediately bring broadband to rural Wisconsin because of investment cost required. Tom Still, Wis. Technology Council**
- The telecom industry is taking away a parent's right to protect their child from harm.
- The solution is fiber optic to the premises: faster, safer, more secure and reliable.
- **Freedom of choice is a fundamental American value! The 5G rollout should be halted!**

STOP
